Claas Xerion
Ag Pro Undercarriage
Installation Instructions

For Models:
Claas Xerion: 4000, 4500, 5000
To The Owner

This manual contains information concerning the installation of the undercarriage. You have purchased dependable, long lasting equipment, but only by proper care and operation can you expect to receive the performance and long service built into our products. Please have all operators read this manual carefully and keep the manual available for ready reference. If you have any questions or concerns, contact Grouser Products.

**Caution:**
- Always use caution when working around any equipment.
- Always wear safety glasses.
- Follow tractor manufacturer’s safety guidelines when installing this product.
- Use paint where necessary to prevent rust.
- Do not modify or permit anyone else to modify or alter the equipment and its components without first consulting Grouser Products.

**Note:**
- When installing hardware, only finger tighten until all hardware is in place.
- A full diagram of the assembly with the full list of parts is on pages 6-7.
- Unstrap and remove any components that are attached for shipping.
- Read all instructions prior to performing installation.
- Tractor frame not shown in some diagrams for clarity.

![Serial Number Location](image)

**Installation**

1. If applicable, remove front weights and weight bracket from front of tractor.

2. Disconnect the wire harness from the lights in front of the front tires. Remove the carriage bolts (A) and remove the bracket and lights from the tractor. They will be reinstalled to the undercarriage in a later step.

**NOTE:** Reattach the battery box with 3/8" x 1-1/4" bolts and 3/8" flange nuts.

3. Behind the front axle, remove the bottom 2 bolts from each side of the tractor. You will reuse the washers in Step #11-12 (B).
4. If applicable, remove 2 bolts in front of the front axle from each side of the tractor (C).

5. Install 4 - 1” x 3” bolts in the threaded boxes on the rear undercarriage (D). Turn the bolts all the way in for installation. The bolts will be adjusted in a later step.

6. Install the rear brackets on the rear undercarriage. The orientation of the bracket should be as shown in the photo. The flat edge of the plate should be on the top (E) and the larger opening for the tube on the inside (F).

7. In front of the rear axle, remove the front 2 bolts on each side (G). The washers will be reused in Step #10.

8. Position the rear undercarriage under tractor and center on the frame of the tractor.

   NOTE: When lifting the undercarriage, watch for any potential pinching of hoses or any other components to prevent any damage.

9. Raise rear undercarriage and guide the rear brackets between the tractor frame plates that you removed the bolts from in Step #7. The round part of the bracket will fit around the round part of the tractor frame plate (H).

10. Attach the rear undercarriage to the tractor with 4 - 24mm x 100mm bolts, 8 - original tractor washers, and 4 - 24mm nuts (I).
11. Behind the front axle, attach the side brackets to the tractor with 2 - 20mm x 110mm bolt and 2 - original 20mm washers in the top holes (J).

12. Attach the side brackets to the tractor with 2 - 20mm x 110mm bolt and 4 - original 20mm washers and 2 - 20mm nuts in the bottom bolts (K).

13. Support the front end of the rear undercarriage until the front undercarriage is installed. You can temporarily attach the rear undercarriage to the side plates to hold it in place. The front undercarriage will also be attached to the side plates and the rear undercarriage in Step #17.

14. Position the undercarriage under tractor, center on the frame of the tractor.

15. Raise undercarriage and insert 2 - front pins into the front side of the undercarriage and into the frame of the tractor (L). The bolts will need to be inserted from the inside. Hold the pins in place by using 4 - 5/8" x 6" bolts, 4 clamp plates and 4 - 5/8" nuts.

16. In front of the front axle, insert 4 - 7/8" x 3-1/2" bolts, 8 - 7/8" heavy washers and 4 - 7/8" nuts into each slot of the undercarriage and into the tractor frame on each side (M).

17. Attach the side brackets to the front and the rear undercarriage weldments with 6 - 1" x 3" bolts, 12 - 1" flat washers, and 6 - 1" nuts (N).

18. Attach the front top bracket to the front of the undercarriage with 4 - 3/4" x 2-1/2" bolts, 8 - 3/4" hardened flat washers and 4 - 3/4" nuts (O).

19. Attach the front top bracket to the tractor with 2 - 1-1/4" x 3-1/2" bolts, 2 - 1-1/4" flat washers and 2 - 1-1/4" nuts (P). The bolts need to be staggered. One should be installed in the top and the other in the bottom.

NOTE: Bracket may look slightly different than the picture but installation is still applicable.
1. After first 8 hours of use, re-torque all bolts.
2. Check all fasteners regularly to ensure proper operation of equipment.
3. Inspect all equipment for existing or potential damages every 10 hours or less.

**Hose Routing**

1. Route the hoses through the hose loops on the undercarriage until you reach the end of the undercarriage.
2. Continue to route the hoses to the back of the tractor. Right after the undercarriage ends, use zip ties to secure the hoses to the large steel line on each side on the tractor (R).
3. Continue to route hoses to the back of the tractor. Exit the tractor frame and plug the hoses into the rear SCV’s.
4. Use zip ties to attach hoses, where necessary, to avoid rubbing and pinch areas.

**Assembling Lift Components**

1. Refer to the Blade Owner’s Manual & Parts Book for instructions on how to assemble the lift components.

**Maintenance**

1. After first 8 hours of use, re-torque all bolts.
2. Check all fasteners regularly to ensure proper operation of equipment.
3. Inspect all equipment for existing or potential damages every 10 hours or less.

Improvements
Grouser Products Inc. is continually striving to improve its products. We reserve the right to change prices, specification, or equipment at any time without notice. We also reserve the right to make improvements or changes when it becomes practical and possible to do so without incurring any obligation to make changes or additions to the equipment sold previously.

Warranty
Grouser Products warrants to the original purchaser of each item that the product be free from defects in material and workmanship under normal use and service for a period of two years. If such equipment is found to be defective within two years, it is the obligation of Grouser Products under this warranty to repair or replace (exclusive of the cost of labor and transportation), any equipment or parts, in the judgment of Grouser Products to be defective in material or workmanship.

All equipment or parts claimed to be defective in material or workmanship must be made available for inspection at the place of business of a dealer authorized to handle the equipment covered by this warranty, or, upon request by Grouser Products, shipped to the Grouser Products factory in West Fargo, North Dakota. Grouser Products shall have no obligation to bear the cost of labor or transportation in connection with replacement or repair of any such defective parts in the setup process.

This warranty covers only defects in material and workmanship. It does not cover depreciation or damage caused by normal wear, accident, improper assembly, improper adjustments, improper maintenance including lack of proper lubrication, or improper use. Therefore, Grouser Products liability under this warranty shall not be effective or actionable unless the equipment is assembled, maintained and operated in accordance with the operating instructions accompanying the equipment. Grouser Products shall have no liability if the equipment has been altered or reworked without the written authorization of Grouser Products.

Grouser Products' parts, which are furnished under this warranty and properly installed, shall be warranted to the same extent as the original parts under this warranty if, and only if, such parts are found to be defective within the original warranty period covering the original equipment.
